

# BTG Infrastructure

Implementing a reliable, secure operating system will result in a highly productive IT infrastructure making your network a strategic asset for your organisation.

Our Product Partners:

- Flexible tools to match your organisational and network needs.
- Secure and reliable IT infrastructure, which adapts to the growth of your business.
- Get the greatest return on your infrastructure investments.
- Centralisation and management of applications.
- IT infrastructure that delivers improved reliability, better availability, and increased scalability.
- Lower hardware acquisition and maintenance costs.
- Spend more time focusing on your business and less time and money on technology issues.

Infrastructure is foundations that assist in the delivery of applications and services users. BTG can design implement and support a wide range of IT infrastructure.

## Operating Systems

Windows Server is a multipurpose operating system capable of handling a diverse set of server roles, depending on your needs, in either a centralised or distributed fashion.

Unix operating systems are widely used in both servers and workstations...

Linux is a Unix-like computer operating systems based on the Linux kernel. Linux's functionality, adaptability and robustness, has made it the main alternative for proprietary Unix and Microsoft operating systems.

## Mail Systems

Mail is an essential tool for modern business. BTG has years of experience in designing and deploying all versions of Microsoft Exchange server. This includes integration of Blackberry and RPC mail connection to mobile computing devices. This includes deployment of anti spam solutions.

## Databases

Microsoft SQL server is a relational database management system which provides a data management platform a wide variety of Client solutions. BTG has experience in deploying and maintaining all versions of SQL Server, experience in designing and deploying Reporting Services and Cube based data analysis.

MYSQL and PostgreSQL are two widely available Open source relational database management systems. Both of these database systems have wide adoptions globally. BTG has experience in delivering solutions from both MYSQL and PostgreSQL.

## Flexible Computing

The desktop computing landscape is evolving. Flexible computing delivers a paradigm shift in deploying and managing desktops. BTG is one of New Zealand leading exponents of this technology.

## Switching and Routing

Switching and Routing are core infrastructure technologies. BTG has key relationships with Juniper Networks, Cisco, and HP Procurve switching and routing solutions. BTG has experience in design and deployment of all areas of Switching and Routing including VLANs, BGP, MPLS.

## Wireless

BTG has experience in designing and deploying a range of wireless solutions, including Cisco, Ruckuis, Trapeze, Fortinet and Linksys wireless solutions.
