**To Whom It May Concern**

Hirepool Limited is a well established New Zealand equipment rental company providing an extensive range of equipment to meet the needs of large contracting companies and the home handyman alike.

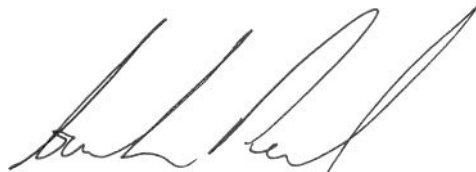

Hirepool Limited engaged Business Technology Group (BTG) at the beginning of 2004 to design and implement an IT infrastructure. The new IT infrastructure was to provide a stable platform for the existing business to function upon and also had to facilitate the vast business growth Hirepool was embarking on.

BTG designed and implemented a distributed Citrix based architecture that was scalable, stable and effective at delivering the required attributes Hirepool wanted from their IT infrastructure. BTG listened to what was required and then delivered.

BTG have Hirepool's interests as their own and consistently deliver what has been proposed. They have also demonstrated an ability to think and develop their proposals strategically in a manner that allows the Hirepool IT infrastructure to progress concurrently with our expanding requirements.

I have no hesitation in recommending them to other companies, especially if that business is undertaking a path to growth.

Yours faithfully,

Gordon Peel
